

Video to Support Teaching

What if you use video?

Implement video in your education

Video offers opportunities for different instructional strategies, to analyze and optimize learning. To use video effectively in your teaching, align your video with other educational materials and activities. Find inspiration for implementation of video in your education in this overview.

Blended learning

Learning can occur in many ways through different media. To create a strong learning environment align off-line, online, individual, collaboration, theoretical and practical information. Make the perfect blend for your course. Tip: Think of the constructive alignment of your course before designing the content.

Flipping the classroom

Learning can occur in many ways through different media. To create a strong learning environment align off-line, online, individual, collaboration, theoretical and practical information. Make the perfect blend for your course. Tip: Think of the constructive alignment of your course before designing the content.

Collaborative learning

Video can be used to save time in class (as lectures can be prerecorded and watched). This frees up time for group discussions and group work. You can even have students make a video as a group assessment. By adding comments to videos, students can continue working together on topics outside class hours.

Learning analytics

Based on your students' behavior you can analyze the effectiveness and efficiency of your video as course material. You can even use the view data of your recorded lecture to identify topics that students pay a lot of attention to.

Knowledge database

Knowledge clips on topics, modeling examples, interviews, media items and other video content can be collected in a searchable database as resource for the students. Consider how you save information and what information is accessible for students at which time.

Evaluation

Videos can be used to give feedback. Did you know that watching your own lecture on video is a very good way to reflect on your own teaching?

Re-use your video

Videos can be re-used in the same course (as repetition), in future courses (same course next year), as prior knowledge for advanced courses. Consider the re-use when designing and sharing your video. Tip: Avoid evanescent information and examples. Make a test video and redesign and record a durable video after evaluating the results.

And many other options...
